# Data layout

## Actual Air Reservations

# Introduction

This data layout provides an overview of ForwardKeys Actual Air Reservations dataset, and includes the values included, the relationships between them, origin and format.

Included in the layout are all columns available in the complete dataset, and they might vary depending on the licensed dataset format bought by the client.

## **About ForwardKeys | Predicting travellers' impact**

ForwardKeys helps its clients measure and improve the effectiveness of their marketing & operations; anticipate the impact of events; and capitalise on future trends. Its data scientists do so by analysing an unparalleled amount of air travel information to produce valuable insights into the profile, behaviour and impact of past, present and future travellers. Sources include airline capacity plus over 17m booking transactions and 7m flight searches per day. Customers are brands, retailers, duty-free specialists, financial institutions, media agencies and travel marketers worldwide.

## **About Actual Air Reservations**

ForwardKeys receives air bookings made by 180 000 online, offline, and corporate travel agencies worldwide daily, showing new booking transactions, modifications and cancellations. These bookings are provided by the major global distribution systems (GDS's), including Amadeus, Sabre and TravelSky. It is often referred to as Marketing Information Data Tapes (MIDT) data.

## Data layout

ColumnName	Type	Accept NULLS	Description	Example
<b>poscity</b>	string	Y	If known, the city code where the travel agency is based.	BHZ
<b>poscountry</b>	string	Y	If known, the country code where the travel agency is based.	BR
<b>pnrcreationdate</b>	date	N	The first transaction date of the booking.	2017-09-22
<b>bookingdate</b>	date	N	The last transaction date of the booking. If this transaction is the initial booking, pnrcreationdate and bookingdate will be the same. If the booking has been modified or cancelled, this will be the date of the most recent change.	2017-09-25
<b>originterminal</b>	string	N	The flight's departure terminal.	00
<b>originairport</b>	string	N	The flight's departure airport.	OTP
<b>origincity</b>	string	N	The flight's departure city.	BUH
<b>originregion</b>	string	Y	The flight's departure country region.	
<b>origincountry</b>	string	N	The flight's departure country.	RO
<b>destinationterminal</b>	string	N	The flight's arrival airport terminal.	00
<b>destinationairport</b>	string	N	The flight's arrival airport.	VIE
<b>destinationcity</b>	string	N	The flight's arrival city.	VIE
<b>destinationregion</b>	string	Y	The flight's arrival country region.	
<b>destinationcountry</b>	string	N	The flight's arrival country.	AT
<b>departuredate</b>	date	N	The local date of departure.	2017-11-08
<b>departuretime</b>	int	N	The local time of departure in minutes (starting from 00.00h).	1120
<b>arrivaldate</b>	date	N	The local date of arrival.	2017-11-08
<b>arrivaltime</b>	int	N	The local time of arrival in minutes (starting from 00.00h).	1165
<b>pooterminal</b>	string	N	The first terminal of departure of the full itinerary.	00
<b>pooairport</b>	string	N	The first airport of departure of the full itinerary.	CNF
<b>poocity</b>	string	N	The first city of departure of the full itinerary.	BHZ
<b>pooregion</b>	string	Y	The first country region of departure of the full itinerary.	BR_MG
<b>poocountry</b>	string	N	The first country of departure of the full itinerary.	BR
<b>bookingsign</b>	string	N	The transaction type that indicates new bookings, modifications or cancellations.	D

<b>paxprofile</b>	string	N	The purpose of the trip according to the ForwardKeys classification algorithm.	BUSINESS
<b>lengthofstay</b>	int	N	The number of days at the destination before the next flight in the itinerary. 0 indicates a return flight, end of trip, transfer or stopover.	0
<b>losname</b>	string	N	The category of the length of stay.	DWELLING_TRANSFER
<b>rbkd</b>	string	N	The booking class.	K
<b>cabinclassitinerary</b>	string	N	The highest cabin class code in the full itinerary.	T
<b>cabinclass</b>	string	N	The cabin class code.	T
<b>distchannel</b>	string	N	The type of travel agency: Online, Retail, Corporate or Others.	CORP
<b>pax</b>	int	N	The number of passengers with the same booking characteristics in one booking.	-1
<b>numpss</b>	int	N	The number of previous steps/stops/segments before the analysed segment	3
<b>numnss</b>	int	N	The number of next steps/stops/segments after the analysed segment	
<b>nextsegmentdeparturedate</b>	date	Y	The local date of departure of the second flight, if the itinerary contains multiple flights.	4
<b>nextsegmentdeparturetime</b>	int	Y	The local time of departure of the second flight, if the itinerary contains multiple flights.	
<b>pss1originterminal</b>	string	Y	The departure terminal of the last previous flight in the complete itinerary. The Pss data will be blank if the flight from the "origin airport" to the "destination airport" is the first flight on the itinerary.	00
<b>pss1originairport</b>	string	Y	If applicable, the departure airport of the last of the previous flights of the full itinerary.	CNF
<b>pss1origincity</b>	string	Y	If applicable, the departure city of the last of the previous flights of the full itinerary.	BHZ
<b>pss1originregion</b>	string	Y	If applicable, the departure region of the last of the previous flights of the full itinerary.	BR_MG

<b>pss1origincountry</b>	string	Y	If applicable, the departure country of the last of the previous flights of the full itinerary.	BR
<b>pss1destinationterminal</b>	string	Y	The arrival terminal of the last previous flight in the complete itinerary. The Pss data will be blank if the flight from the "origin airport" to the "destination airport" is the first flight on the itinerary.	02
<b>pss1destinationairport</b>	string	Y	If applicable, the arrival airport of the last of the previous flights of the full itinerary.	GIG
<b>pss1destinationcity</b>	string	Y	If applicable, the arrival city of the last of the previous flights of the full itinerary.	RIO
<b>pss1destinationregion</b>	string	Y	If applicable, the arrival region of the last of the previous flights of the full itinerary.	BR_RJ
<b>pss1destinationcountry</b>	string	Y	If applicable, the arrival county of the last of the previous flights of the full itinerary.	BR
<b>pss1lengthofstay</b>	string	Y	The number of days at the Pss1 destination before the next flight. 0 indicates a return flight, end of trip, transfer or stopover.	0
<b>pss2originterminal</b>	string	Y	The departure terminal of the second previous flight, counting in reverse order, (-2), in the complete itinerary. The Pss data will be blank if the flight from the "origin airport" to the "destination airport" is the first flight on the itinerary. It is important to know that, if numpss=2, the point of origin will be in pss2 columns. If numpss=4, the point of origin will be in pss4 columns	02
